Got it 👍🏽 — I hear your frustration. Let me reset properly. I'll **not recycle** or simplify what I gave you before. I'll treat this as a *full integrated design spec* that covers **all the requirements you've given so far**:

- **Zero hallucinations / zero duplicates**
- **Refined interim + polished final**
- **Premium look and feel (executive-ready)**
- **Speech bubble + document hybrid layouts**
- **Contextual subject + tone emojis**
- **Smart guidance (no bombardment, only where necessary)**
- **Pre → During → Post recording visual journey**
- **Transitions between states (interim → final, stop → post-recording tasks)**
- **Seamless page/window transitions to post-transcription activities**
- **Visual background continuity (nothing jolting or harsh)**

I'll **expand the spec extensively**, covering:

1. **Phase journey (pre, during, post)**
2. **Transcript transitions (interim → final, stop event)**
3. **Post-transcription task states (what user sees, how menus appear)**
4. **Window/page transitions (navigation to exports, analysis, dashboard)**
5. **Continuity rules (so every transition feels premium)**
6. **Risk & gap handling (what we haven't covered yet)**
7. **Storyboard-like descriptions (exactly what user sees step by step)**

Mina Transcript Display Pack

Crown+ Continuity Edition — Seamless Premium Flow from Recording to Post-Tasks

---

1. Pre-Recording (User sees before pressing Record)

- **Canvas:** blank, calm, intentional. No "fake" transcript placeholders.
- **Primary CTA:** Record button has a *subtle spotlight glow*.
- **Status Chip:** `Ready`. Muted grey, calm.
- **Helper (first-run only):** `Start when you're ready.` (appears for 3s, auto-dismisses).
- **Background Behavior:** nothing flickers, nothing distracts; space feels prepared, like fresh paper.

2. During Recording (Live Transcript State)

Header: `Listening` ● (subtle red dot, soft pulse).

Transcript lines:

- **Interim:**

  - Grey, slight italic.
  - Last 2 words shimmer faintly.
  - Caret ❘ blinks at end.
  - No hallucinations. No duplicated words.
  - If uncertain: text pauses, caret keeps blinking (no bad guesses).
- **Finalization (line by line):**

  - Grey → black fade (200ms).
  - Italic → upright.
  - Punctuation + casing appear instantly.
  - Sentence rises 3–4px then settles.
  - Caret drops to new line.
- **Paragraph breaks:**

  - ≥2s silence OR new speaker = new block.
  - Meta row slides in: `[mm:ss]` ● `Speaker` (Conversational) OR `[HH:MM:SS]` ● `Speaker` (Executive).
  - Emojis (if eligible) fade in on finalization (100ms delay).
- **Visual Layout:**

  - **Hybrid:** ≤2 sentences = bubble; long = document paragraph.
  - Active bubble/paragraph only shows shimmer/caret.

Background presentation:

- Transcript grows naturally downward.
- Anchored at live line.
- If user scrolls up → feed pauses, floating pill appears: **Jump to live**.

3. Stop Recording (Session-Level Transition)

User taps Stop:

- Header chip fades from `Listening` ● → `Stopped` (red dot → muted grey).
- Caret ▐ vanishes instantly.
- Any interim still visible instantly finalizes (grey → black, italics → upright).
- Container smoothly scrolls to last line.
- Emojis lock in.
- Transcript "rests": no shimmer, no motion.

User feeling: Closure. The transcript looks complete, clean, export-ready.

---

4. Post-Recording Task Layer (User Options)

After 1s idle → a **task bar fades in** below transcript:

- **Desktop:** Copy • TXT • DOCX • PDF • Share (inline, muted icons + labels).
- **Mobile:** Kebab ⋮ → smooth slide-up menu.

Behaviors:

- Hover/press → soft glow, not color shock.
- Export: transcript area shows subtle shimmer <1s, then toast: `Export ready` (bottom corner, fades 2s).
- Share: modal **slides up** (not pops), dims background, offers sharing options.
- Analysis/Notes (if enabled): side panel **slides in** from right; transcript remains visible behind.

Premium cues:

- Transcript never vanishes.
- All post-task elements feel like *layers above the transcript*.
- No harsh redirects, no reloads.

---

5. Page/Window Transitions (Navigation Continuity)

- **Dashboard → Transcript View:**

  - Dashboard background fades down.
  - Transcript container slides up, elevated into focus.

- **Transcript → Post-Task (e.g., Analysis):**

  - Right-side panel slides in; transcript remains dimmed behind.
- **Back to Dashboard:**

  - Transcript shrinks smoothly into a session card.
  - Creates a mental anchor: "this transcript lives here now."

Rule: Always transition via fade/slide/ease; never hard cut.

---

6. Continuity Principles (Always Visible Truth)

- Transcript is **never replaced or hidden** by tasks.
- Tasks/modals/panels are **layers on top**, dimming or sliding.
- When navigating away, transcript either:
  - Shrinks into a card (Dashboard).
  - Stays visible but dimmed (Analysis modal).
- No sense of loss — continuity reassures the user that their content is safe.

---

7. Risks & Gaps Addressed (New Layer)

- **Bombardment:** guidance shown *only once or on hesitation*; no constant helper text.
- **Hard resets:** transcript is never cleared on stop; tasks don't replace transcript.
- **Laggy exports:** export shows shimmer + toast; no blank waits.
- **Modal overload:** only one layer visible at a time; panels and modals never overlap.
- **Accessibility:**
  - Reduced Motion = fades only, no shimmer.
  - High Contrast = dark surfaces + bright text; same flows.
  - Screen readers announce: "Recording started… Sentence finalized… Recording stopped."

---

8. Storyboard Descriptions (Step-by-Step Visuals)

Before recording:

[Header] Ready
[Record Button] glowing softly

Canvas: blank, quiet

Recording (interim):

[Header] Listening ●
[00:12] ● Speaker 1
this is an example ▐   (grey, italic, shimmer)

Recording (finalized):

[00:12] ● Speaker 1
This is an example. (black, upright, punctuation locked)

Stop pressed:

[Header] Stopped
Caret disappears
Last line finalizes instantly
Transcript scrolls to bottom

Post-tasks fade in:

Task bar appears: Copy • TXT • DOCX • PDF • Share
Transcript remains visible in background

User chooses Share:

Modal slides up
Background dims
Transcript still faintly visible

User returns to Dashboard:

Transcript container shrinks into saved session card
Dashboard brightens back

---

9. Premium Feel Summary

- **Minimal by default** — only primary signals visible.
- **Refined transitions** — shimmer, fade, settle, slide; never pop or jolt.
- **Continuity always** — transcript stays in view through every stage.
- **Calm confidence** — no hallucinations, no duplicates, no overload.
- **Executive polish** — final transcript looks like it was edited by a professional notetaker.

Would you like me to now **expand this into visual storyboards per screen** (mockup-level step flows: Dashboard → Recording → Stop → Tasks → Navigation), so your designer/agent can literally build the transitions pixel-perfect?
